### 3. EXPLANATION OF TABLES

Tables published in this bulletin supply the complete available records of all fish, mollusks and crustaceans landed in California by commercial fishing vessels or shipped into California for processing. Fishing boats registering and delivering their catch in California may have their home ports in California, Oregon, Washington or Alaska; no distinction or separation is made in the catch records.

The term "shipment" as used in the tables indicates that the fish were brought into California by common carrier and that they were not caught by our registered fishing fleet. Shipment figures are complete for fish that are processed. Statistics on shipments of fish destined for sale, either fresh or frozen, or for transshipment are not included because our records are incomplete.

On our source documents (fish receipts) the condition or extent of cleaning is not always shown, and for the various species of fish, this cannot be ascertained. We, therefore, use the weight as given by the dealer with the exception of catfish for 1953. This species is usually delivered cleaned, and as the cleaning loss is 50 percent, the total poundage on the fish receipt is doubled.
